

SANIT descaler

Removes limescale deposits from TCU's

After using the product, the risk of limescale build-up is significantly reduced.

Pour a 1:5 mixture into the TCU and heat it to 60°C, then let it ferment for approx. 15-20 minutes.

After draining the mixture, flush it with clean water for about 15-20 minutes for complete cleaning.

Active ingredient:

- citric acid,
- <5% non-ionic surfactant
- <5% cationic surfactant

Package: 500ml
